SUMMARY

Full-stack Software Engineer with a strong foundation in backend systems, APIs, and AI-powered applications. AI software development lead on a production AI tutoring platform, owning requirements, sprint planning, and delivery across a distributed dev team. Building GymOS - a multi-tenant SaaS platform - using Django, FastAPI, Next.js, PostgreSQL, Redis, Celery, Stripe, and the Anthropic Claude API.

EDUCATION

B.S., Software Engineering — May 2026
Arizona State University, Tempe, AZ — GPA: 4.0, Summa Cum Laude

B.S., Criminology and Criminal Justice — May 2018
Arizona State University, Tempe, AZ — GPA: 3.88, Summa Cum Laude

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL

Backend & APIs: Django, Django REST Framework, FastAPI, Celery, REST API design, JWT/OAuth 2.0, webhooks, event-driven architecture, gRPC/Protocol Buffers

Frontend: Next.js, React, Tailwind CSS, Streamlit

Data & Caching: PostgreSQL, MongoDB Atlas, Redis, relational and multi-tenant schema design, multi-tenant SaaS architecture

Infrastructure & DevOps: Docker, GitHub Actions (CI/CD), Google Cloud Platform, Netlify, Azure App Service, Linux/Unix

Testing & Practices: pytest, JUnit, TDD, CI quality gates, code review, Agile/Scrum, Git/GitHub

PROFESSIONAL EXPERIENCE

METY Technology - AI Software Development Lead — May 2026 - Present

- Team lead for the AI Tutor platform: own the project board (Taiga), scope and write developer tasks, run a two-week sprint and demo cadence, and coordinate with the owner and production manager to integrate cross-functional teams' features; authored the platform's master FRD and TRD as the single source of truth for a rotating dev team.
- Designed and built a three-tier question verification pipeline - SymPy symbolic checking, dual-LLM cross-verification with majority-vote adjudication, and a human review dashboard - and ran it across the full 3,400-question bank spanning 8 algebra domains, surfacing 50+ incorrect answer keys that would have marked correct student answers wrong; now the quality gate for all newly generated questions.
- Implemented the assessment and reasoning analysis workflow (FastAPI, MongoDB) and engineered the scoring and grading system; built FastAPI endpoints over the domain logic layer to replace direct database access in the Streamlit to FastAPI/React migration, and set up GitHub Actions CI running build, lint, and the full pytest suite on every pull request.
- Deployed the platform to staging on Google Cloud with MongoDB Atlas and a Netlify frontend, all secrets and API keys held server-side so no credentials live in local developer environments; build with security in mind throughout.

GymOS - Full-Stack Software Engineer (Independent Contractor) — May 2026 - Present

- Sole engineer designing and building GymOS - a multi-tenant SaaS platform for gym management, contracted by a client in the fitness industry; architecting a tenant-isolated full-stack system using Django REST Framework, FastAPI, Next.js, PostgreSQL, Redis, and Celery, backed by a 600+ test suite and CI gating lint, security scanning, migration drift, and per-app coverage thresholds.
- Integrating Stripe (recurring billing, Stripe Connect for B2B) and the Anthropic Claude API (context-aware in-app help assistant); building an optional module system serving martial arts schools.
- Authored the full Functional (100+ requirements across 18 domains) and Technical Requirements Documents covering architecture, security, scalability, and the CI/CD pipeline.

PROJECTS

Self-Learning AI Tutor (ASU Capstone) - **Python, Streamlit, MongoDB, Docker, Azure** — August 2025 - May 2026

- Led the team that built the original platform - drove architecture decisions, ran the project workflow, and met with the client through to Azure deployment.

SunDevil Connect - Java, gRPC, Protocol Buffers, JavaFX, Gradle — January 2026 - May 2026

- Engineered a distributed client-server system using gRPC and Protocol Buffers for efficient, strongly-typed communication across 10+ backend services.
- Developed backend services using layered architecture (controllers, services, DAO) for maintainable system design.

OTHER WORK EXPERIENCE

Arizona State University - Undergraduate Teaching Assistant — August 2025 - December 2025

- Mentored students one-on-one through algorithms, data structures, and software engineering concepts.

Hearth & Home Distributors of Utah - Sales & Project Coordinator — July 2020 - February 2022

- Led end-to-end project workflows for residential installations - scheduling, materials, and customer communication.
