SUMMARY

Full-stack Software Engineer with a strong foundation in backend systems, APIs, and AI-powered applications. Currently building GymOS — a production SaaS platform for gym management — using Django, FastAPI, Next.js, PostgreSQL, Redis, Celery, Stripe, and the GoHighLevel and Anthropic APIs. Track record of leading technical projects end-to-end, driving architecture decisions, and mentoring others. Passionate about building scalable, real-world software that solves problems.

EDUCATION

B.S., Software Engineering

Arizona State University, Tempe, AZ

May 2026

GPA: 4.0, Summa Cum Laude

B.S., Criminology and Criminal Justice

Arizona State University, Tempe, AZ

May 2018

GPA: 3.88, Summa Cum Laude

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL

Backend Frameworks: Django, Django REST Framework, FastAPI, Spring Boot, Node.js

Frontend: Next.js, React, Streamlit, Tailwind CSS, shadcn/ui

Databases & Caching: PostgreSQL, MongoDB, Redis, relational DB design, multi-tenant schema design

APIs & Integration: REST API design, JWT authentication, OAuth 2.0, Stripe API, GoHighLevel API, Anthropic Claude API, gRPC, Protocol Buffers

Async & Background Jobs: Celery, task queues, webhook processing, event-driven architecture

Infrastructure & DevOps: Docker, GitHub Actions (CI/CD), AWS EC2, Azure App Service, Render, Linux/Unix

Architecture: Multi-tenant SaaS, distributed systems, microservices, layered architecture

Testing & Quality: JUnit, TDD, Git, GitHub, code review

PROFESSIONAL EXPERIENCE

METY Technology — Software Developer Intern

May 2026 – Present

- Contributing to the development of an AI-powered tutoring platform as part of a dedicated production team, collaborating directly with the production manager and cross-functional team members.
- Actively contributed to technical discussions during weekly team meetings, presenting completed platform components and providing input on architecture decisions, assessment workflows, and system design trade-offs.
- Building and documenting platform components spanning functional requirements, assessment workflows, user management, and UI/UX specifications across a multi-component production system.

Full-Stack Software Engineer (Contract)

May 2026 – Present

GymOS — Independent Contract, Remote / Post Falls, ID

- Sole engineer designing and building GymOS — a production multi-tenant SaaS platform for gym management, contracted by a client in the fitness industry; architecting a full-stack system using Django REST Framework, FastAPI, Next.js, PostgreSQL, Redis, and Celery designed to scale to thousands of concurrent gym tenants.
- Integrating GoHighLevel API (CRM, workflows, Voice AI), Stripe (recurring billing, Stripe Connect for B2B), and the Anthropic Claude API (context-aware in-app help assistant); building an optional module system serving martial arts schools, CrossFit boxes, gymnastics studios, and general fitness gyms.
- Authored a comprehensive Functional Requirements Document (100+ requirements across 18 domains) and full Technical Requirements Document covering system architecture, security, scalability, and CI/CD pipeline.

PROJECTS

Self-Learning AI Tutor — Python, Streamlit, MongoDB, Docker, Azure

August 2025 – May 2026

- Led the team on a production AI tutoring platform — drove architecture decisions, managed the project workflow, coordinated between team members, met regularly with the client to align on vision and present deliverables, and pushed the project forward end-to-end from design through deployment.

SunDevil Connect — Java, gRPC, Protocol Buffers, JavaFX, Gradle

January 2026 – May 2026

- Engineered a distributed client-server system using gRPC and Protocol Buffers for efficient, strongly-typed communication across 10+ backend services.
- Developed backend services using layered architecture (controllers, services, DAO) for maintainable system design.

OTHER WORK EXPERIENCE

Arizona State University — Undergraduate Teaching Assistant

Aug 2025 – Dec 2025

- Mentored students one-on-one through algorithms, data structures, and software engineering — breaking down complex concepts, guiding debugging sessions, and fostering a supportive environment where students built real confidence and problem-solving skills.
